**RISK: ESG Managers® Portfolios are multi-manager funds, which are a mix of underlying mutual funds and sleeve subadvisor portfolios. The Funds' allocations may change due to market fluctuations and other factors.**

<sup>†</sup>A 1.00% CDSC (contingent deferred sales charge) may be charged on any shares sold within 18 months of purchase over \$1 million.

<sup>×</sup>The Blended Index is comprised of 66% S&P 500 Index and 34% MSCI EAFE (Net) Index. The S&P 500 Index is an index of large capitalization common stocks. The MSCI EAFE (Europe, Australasia, Far East) Index is a free float-adjusted market capitalization index that is designed to measure the equity market performance of developed markets, excluding the U.S. and Canada. The MSCI EAFE Index consists of the following 21 developed market country indices: Australia, Austria, Belgium, Denmark, Finland, France, Germany, Hong Kong, Ireland, Israel, Italy, Japan, the Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, and the United Kingdom. Performance for the MSCI EAFE Index is shown "net", which includes dividend reinvestments after deduction of foreign withholding tax. One cannot invest directly in an index.

<sup>‡</sup>The S&P 500 Index is an unmanaged index of large capitalization common stocks. One cannot invest directly in an index.

<sup>†</sup>A 1.00% CDSC (contingent deferred sales charge) may be charged on shares redeemed within 1 year of purchase.

<sup>1</sup>Standard Deviation measures a Fund's variation around its mean performance; a high standard deviation implies greater volatility.

<sup>2</sup>Beta reflects the sensitivity of a Fund's return to fluctuations in its benchmark; a beta for a benchmark is 1.00: a beta greater than 1.00 indicates above average volatility and risk.

<sup>3</sup>Alpha is a coefficient measuring risk-adjusted performance, considering the risk due to the specific security, rather than the overall market. A positive alpha reflects relative risk-adjusted performance of the Fund versus its benchmark.

<sup>4</sup>R-Squared is a measure of how much a portfolio's performance can be explained by the returns from the overall market (or a benchmark index). The measure ranges from 0, which means that the Fund's performance bears no relationship to the performance of the benchmark, to 100, which means that the Fund's performance is perfectly synchronized with the performance of the benchmark.
